

Hello David,

GENESYS Systems Integrator recently completed a shut-down installation project for the Paint Department at the BMW Manufacturing facility in Greer, S.C. I am pleased to say the project went very well. GENESYS designed, manufactured and installed a conveyor that is critical for delivering painted bodies to our Assembly department. Your team was given a short schedule to design, deliver and install this conveyor but was able to meet the challenge and exceed our expectations.

From the competitive proposal thru delivery of the complete project, your team worked with professionalism. Below are a few key points we felt lead to your success:

- Interactive meeting detailing the intended design of the conveyor
- Reverse engineering to adapt the new conveyor design to fit within the existing system
- Professional job site management and installation work by Joe Guenther, Rickey Howington and Mickey Wilbanks
- Expedited delivery of OEM manual and design drawings
- Open communications providing status updates of project progress from design to installation

Thanks again for a job well done.

Stan Owen
